Six Core Pillars of the Program

Our program covers everything you need.
We organize our work around these **six key areas**.

- A structured program to protect your business's data.

3 Simple Phases

We break down the journey into three straightforward phases to make it easy to understand and manage.

Phase 1

Understand
& plan

Phase 2

Implement
& Secure

Phase 3

Monitor &
Support

Phase 1: Understand & Plan

We start by getting a clear picture of where you are now and what you need to do to get secure and compliant.

Key Steps

Check the rules

We'll review the regulations and risks that apply to your business.

See what you've got

We'll evaluate your current setup to find any gaps.

Create a roadmap

We'll build a simple, prioritized action plan.

You get: A clear report on where you stand and a simple action plan tailored to your business's needs.

Phase 2: Implement & Secure

We help you put all the necessary tools, training, and policies in place.

Key Steps

Put in projections

We'll implement essential security measures, including both technology and clear company policies.

Train your team

We'll run training and simulations (like fake phishing emails) to help your staff build a security-first culture.

Get papers in order

We'll create the necessary documentation and legal registers to prove you're compliant.

Check your partners

We'll help you assess the security of your suppliers and vendors.

You get: A complete, ready-to-use security framework that protects your business and demonstrates compliance.

Phase 3 : Monitor & Support

We stay with you for the long haul to make sure everything keeps working and improving.

Key Steps

Keep testing

We'll perform regular checks and updates to your security systems.

Be there for you

We provide expert help and coordination during any security incidents.

Advise leadership

We give direct advice to your executives to keep them informed and in control.

Ahead of the rules

We'll continuously monitor regulations and help you adapt.

You get: A long-term partner who keeps you protected and ensures you remain compliant. This can be structured as ongoing support or a "CISO-as-a-Service" model.

Consultants profiles

The team dedicated to your project
